

BANK ANALYTICS

INTRODUCTION

The **Bank Analytics** Project helps us to analyse transactional banking data and find trends and patterns which enable banks to make informed decisions. The data driven decision in banking empower stakeholders to optimize strategies and detect fraudulent activities.

OBJECTIVES

It helps us to understand-

- Consumer spending behaviour
- Borrowing ability
- Loan performance
- Lending capacity of banks
- Risk assessment
- Market trends etc.

Our Analytical Framework: Data and Methods

We analysed Banking Data having customer details, sanctioned loan amount, recovery details, interest earned, delinquent loans and NPAs.

We further analysed customers' transaction details on the basis of credit card and debit card transactions.

We used-

- SQL to fetch data from the databases.
- Power query editor to transform the data.
- Excel to analyse the initial patterns and identify the key performance indicators.
- Power BI and Tableau for visualizing and dashboarding.

KEY PERFORMANCE INDICATORS

KPIs (Bank data)

- Total loans sanctioned
- Total funded amount
- Total collection
- Total revenue
- Total interest recovered

KPIs (Credit & Debit card)

- Total transaction amount
- Account activity ratio
- Net transaction amount
- Credit to debit ratio

INSIGHTS (Bank data)

- The highest amount of loan is given to the people belonging to the age group of 26-35. The probable reason being the young earning class.
- 'E' grade loan amount being the highest of all grades questions the loan distributing criteria.
- Default rate is 1.56% which amounts to 11.24M.
- Hisar, Muzaffarpur, Behror are the branches which are having most number of default loans.
- 'E' grade loans are given on the least interest rates ranges between 4%-8% which is again questioning the lending criteria.
- Approx. 11% loans are delinquent.
- Approx. 65% loans are not verified which is not a good lending practice and are prone to default.
- The maximum loan amount is sanctioned for home loans.
- ST caste is having the least share in loans sanctioned.

INSIGHTS (Credit & Debit cards)

- Transactions are made using Credit Card, Debit Card, and Bank Transfers. Credit Cards seem to be the most common for online and client payments.
- Kotak Mahindra Bank handled the highest transaction volume at 42.83M, closely followed by Axis Bank and SBI, showing strong performance across top banks.
- Suspicious transaction frequency remained stable throughout the year.
- Account activity ratio is extremely low which is 0.00019, which shows that customer accounts are not being used frequently.
- Most of the amount spent based on Description are Utility bill payment, client payments, online shopping, restaurant bills. these are expenses showing regular spending activity
- YOY growth is highest in month of March which is 8.57%.
- January & May months have increase in Suspicious transactions. Could be due to system issues or fraud and needs further checking for the same.

PROJECT SUMMARY:

- Analyzed customer behavior, branch performance, and overall banking operations.
- Identified key trends in loan disbursement, repayments, and transaction patterns.
- Built dashboards to show important metrics like credit/debit flow, account activity, and risk alerts.
- Highlighted branches and banks with the highest and lowest performance.
- Detected high-value and unusual transactions to help reduce financial risks.
- Presented insights in an easy-to-understand format using charts, graphs, and KPIs.
- Helped support smarter banking decisions using data.

THANK YOU!
